MESSES GIBB, LIVINGSTON & CO. BANKERS. THE HONGKONG AND SHANGHAI BANKING CORPORATION. LEGAL ADVISER. H. S. WILKINSON, Esq.

THE Directors of the SHANGHAI LAND INVESTMENT COMPANY, LIMITED, STE prepared to receive applications for 2 0,000 l'aels six per cent. debentures terminable in twenty years from the 1st of June, 1890, but redeemable at the option of the Company in five years from the 1st of June, 1890, or at any time thereafter on giving six months' notice. These debentures are part of an issue of Tls 1,000,000 authorised in order to provide funds for the erection of buildings on the Company's property, and for the carrying on of the business

of the Company as a Liand Investment and Land Mortgage Company, There is an outstanding mortgage of Tla. 200,000 on that part of the Company's property known as Wills's Estate, which is payable on the 2nd of April, 1892, and Tis. 200,000 of the authorised issue of Tla 1:000,000 will be referred for such payment. Subject to this mortgage until it is paid off, the depentures of the whole issue will be a first charge on the undertaking and all the property of the Company for the time being, including its uncalled capital, as a floating

The debentures will be issued in sums of The 1,000, Tis 500, and Tis. 100 each, in such propertions as may suit the convenience of applicants. making up the total of Tls. 250,000. They will bear interest at the rate of six per cent. per annum payable half-yearly by warrants on the 1st of June and the 1st of December. The first interest will be payable on the 1st of December next.

No tender under par will be entertained. A deposit of ten per cent. of the aggregate paid to the Company's Bankers.

The balance of the price tendered will be payable within one month after allotment. Banker's receipts to be retained by the spplicant will be issued for the amount of th deposit and exchanged for definitive debentures

on payment of the balance. In case a less number of debentures is allotted with remittance for cost than is applied for, the excess of the deposit will be applied in or towards payment of the future instalmente due upon such number as may be allotted. Feilure to pay any instalment when due will render the allotment liable to cancellation, and the previous payments to forfeiture. Forms of application may be obtained from the Company's Bankers or the Agents, and should be filled up and sent to the Company's Bankers, the HONGEONG AND SHANGHAI BANK-ING CORPORATION, at Shangbai, secompanied by a deposit of ten per cent, upon the amount of Equality suited FOR DRAWING ROOM OF the debentures applied for.

The form of debenture can be seen at the Office of the Company By order of the Board of Directors GIBB, LIVINGSTON & Co., Shanghai, 5th May, 1890.

> His Majesty the King of Siam with the Queen and Crown Prince and H. R. H. Prince Devawongse, who had gone to meet His Majesty at Kodab, arrived at Penang from that place on the 17th May in the yacht Uhan Buretet, act or approved by the Peking Government. In companied by a fleet of night vessels: On Saturday morning the body of an old from this Colony.

woman was found ficating in the harbour towards West Point with the throat cut. It was at once taken to the mortuary, where it has since been identified as being that of a woman who was of unsound mind. She is supposed to have committed sincide and the body had apparently only been some twelve hours in the water.

Ramoure have been in circulation during the last day or two that a settlement has been arrived at in the North with reference to the competition between the steamship companies on the coast, and that the settlement involves the withdrawal of the China Merchants S. N. Co. from the Canton river. The Hongkong, Canton, and Macao Steamboat Company have, however, nothing to say in the matter, the settlement resting with the other interests involved.

The Band of the let A. & S. Highlanders will play the following programme in the Public Gardens this evening, commencing at 8.30 p.m.:-"Silver Trumpets ! ..... Viviani. Gasener. "Remin of all Nations" ..... Golfrey.

PAPERS' PROGRAMME.

.. The Hills of Glenorchy The Broomar Highlanders. The Straits Times says :- Colonel Dunlap,

about the post of Inspector-General of Police. gress was being made by Buddhist doctrines in |. Europe. It is now said that a decided move shares of \$125, to be issued at the price of in this direction is taking place in Paris. This phenomenon (says the correspondent of the Daily Telegraph) is probably to be accounted for by the fact that people who have discarded Christianity find themselves unabla to get on after a time without some kind of religion or philosophy; and so turn their attention to any new thing in the hope of filling up the vaccours, M. Leon de Rosny, one of the most popular of the Sorb nue Professors, has been lecturing recently on Buddhism, and he says he could never have imagined that it could have taken root in trance as it has done. He is of . opinion that the growing favour in which it is a held is due to the fact that, fer from being in conflict with modern science, it really contains the principles of the truths expounded by our savanta. Its disciples are most enthusiastic. and herein lies a danger for they complicate Buddha's pure philosophy with a variety of supernatural theories, and dabble in spiritualism, hypnotism, and other uneanny practices in the fore-front of which "magic" may be placed; but M. Leon de Rosny declares that the leaders of the movement deplore this diversion, which is at variance with Buddhist doctrines, and preclaim that they have absolutely nothing to do with the occult sciences." He fears, however, that the most vidiculous extravagances will be indulged ic, as no conception can be formed of the amount

On this point, another experiment of and sand, mingled with sewage, takes place giving Mr. Santo Crimp may be cited. He cheed off off onsive omanations, which may, and often overy known opening to the Wimbledon sewer, except these at the top and the bottom. To "4.-In my original report on the Sanifary the upper opening he attached a ventilating Condition of Hongkong, I proposed to remady fan, which exhausted the air from the sewer this, by diverting the sewage-proper and dry- sufficiently rapidly to remove its whole content: weather flow from the combined sower and every five minutes. Nevertheless, whilst the atorm-water channel, at the point where it enters I fan was at work, his apparatus, at the lower. the flat region, and conducting it by a separate opening, continued to register a steady downward

pipe of small diameter to the sea. I further re- flow, just as it did before the fau commenced to water channels, in their steeper parts, so no to fan, as well as that which flowed out below, render them more suitable for the conveyance of most have entered by some natripped house sewage. These recommendations, however, have drain or other undiscovered opening. Indeed it not been carried out; nor with the exception of may safely be asserted that the contilation of a arrival of Mr. Copper, has any improvement steady flow of air through it to some one point, been made in the construction of street-sewers. I has never been effected. Nor with the materials As far, as sewerage is converned, matters are and appliances at command does it seem likely terception at an earlier period. All recent ex- sewers at one point, and producing an indraft perionce shows that a channel suitable for the at another, it would have to be so powerful as to has not only here, but everywhere, been weigh- to teakage, or from evaporation, would admit enough air to destroy the current in the more.

shown that a small amount of sounge will taint 6. It is usual to speak of "sewer gas" as a large volume of air. Clearly therefore, the

prove of both reports and the accounts as they who is drowned, on falling into the water, is moulds, and the like, which doubtless contribute to the contamination of the air and to the asno receipts worth speaking of but only expenses. It sent a quantity of from 15 to 30 tons daily. The work could not peasifily so otherwise for in dress of any expenses. It sent a quantity of from 15 to 30 tons daily. The work could not peasifily so otherwise for in the valley by means of stars without the resolution, it was dressed in the valley by means of stars with a range of the output that the vast domain of our Company should be yet into a large story within a year a large story within a year a large story with a range of the output that the vast domain of our Company should be yet into year and the sewage, even if received already put resistant that the sewage even if received already put resistant that the sewage even if received a large story with a large story with a large story with a part of the output of the subject of the subject of the output of the subject of the subject of the subject of the subject of the output of the subject of t

forth. It is dear, therefore, that the section of rapidly assimilated by fish and ornataces, and as sower: strate be reduced to the minimum, and it will be delivered into from 10 to 30 feet of they water, it will be so designed as to convey water, it will be so diluted as to produce no larm amounts of rain water as well as sewage. nuisance, certainly nothing comparable to that 17. he manner of determining the minimum inevitably caused by the mass of oraft which from size will be discussed later ou, as well as the quent the Praya. The proposed but fall, there conditions under which rain-water may be all fore, is free from objection.
mitted, and to what extent. The true remedy, 28.—The sizes of the sewer pipes, as proposed however, for stenches from sewer-vents is to by Mr. "Cooper, are certainly ample, and will make the sewage passing through the public pullice to convey; not only the sewage proper assewers as little offensive as possible. To this but a considerable amount of rain-water also end, it should be discharged into the sewers fresh, Indeed I think it possible that it may prove before putrifaction has commenced, and it desirable to reduce the diameter, in some in should be freely diluted with water. In other stances at least. But on this point I cannot words, the remedy for the principal incon- give an opinion until I have made the necession with sewers many calculations; a somewhat lengthy operaconsists mainly in good house-drains, properly tion, which would have unduly delayed, the made and propagity used; in an ample water submission of this report had I waited for their

supply, not lavished or wasted; but well- completion. good house-drains. But the people themselves possible. have the prevention of unisances mainly well in 30. Mr. Cooper catimates the probable cost their own hands. If they will take care of their of the works for this district at \$19,000. I am house-drains, the sewers will look after them- of opinion that this sum will amply suffice to a lyes. Unless the public generally co-operate cover the cost of the necessary works, - For reawith the Government in amitation, by looking sons already given in a provious report, I think after the interior arrangements of their dwell- it desirable that the two nullahs which bound ings, by insisting on the drains being well con- inland lots Nos. 941 and 949 should be regulated structed and decently maintained, all expenditure in the manner described in the said report. The on sewers will be, if not useless, very much re- cost of the work may be estimated at \$6,000 duced in value as regards the public health. simple one, certain success. classes of that community. It is scarcely to be pared. I recommend, therefore, that authority Chinese Loan '84 C., anticipated that such a population will neglect to take the simple precautions necessary for the sible. I think it most important that some part. Dairy Farm Co. habits are such as lead to an abundant consumption of water. Any reasonably well constructed differded model, seeing work in progress, I shall gordon & Co., A. G., system of sewers is certain to be successful. If be much better able to advise and direct future Green Island Cement

following principles should be kept in view. 32. I propose shortly to report to you on the Hongkong Electric... a war should be sach that with this amount of water pissing through it, the velocity shall, on no account, be less than 2 feet per second. preferably more. This velocity is the least that will prevent deposit, and will scarcely serve to remove it when once formed. During some part of ouch day considerably greater than 2 feet per. second should obtain.

20 .- To prevent casual obstruction, it is found that certain minimum sizes of sewers should be used, irrespective of the duty that they have to perform, say Sin. for principal sewers, and 6in. for branches. To provide for new buildings also, sowers must be made comewhat larger than the size which would be in accordance with the flow of sowage from existing tonements: Nor in the case of pipes, is it possible to adjust the sizes with any minute accuracy. The graduation of sizes in the market does not permit one to do so. 21.—For these reasons, it will be advisable to provide mans of flushing the sewer by discharging, suddenly, from time to time, a considerable volume of water, so as to cause a rapid current through it. This may be done either by collecting the sewage from higher levels in a tank or by water derived from some other source, such as the water-works or perennial springs. In the present instance, numerous natural springs will afford an ample supply for flushing. It is preferable, whenever practicable. that the sewer should koop itself clear of deposit without flushing. The suddenly discharged flush displaces an equal volume of air, which must escape somewhere, and so produce smells from the yeats, which will be aggravated by the fact that deposit has taken place, temporarily. which is stirred up by the flush.

To do so absolutely would complicate housedrainage. If backyards were provided with two sets of drains, there would be no means of preventing sowage from being poured down the storm-water channel. Again, the rain-water which flows off court-yards, stable-yards, and the like is practically as foul as sewage, particularly at the commencement of a shower. It however, be seen that the sewers, even when reduced to the minimum practicable size. in accordance with the principles laid down above, will yet have a margin of carryingcapacity sufficient to provide for a slight rainfall. House-drains, on the other hand, may have to carry off a considerable amount of rainwater. The sewers need not be enlarged on this account. The proposed system crosses and ra-crosses natural water-courses, at frequent inbervals. At these points, overflows should be constructed by which the contents of the sewer can escape. Then the sewer will carry as much as it can, and in heavy storms the excess will escane by the storm overflow to the mearest water-course down which, by that time, a roar-

22. -It will not be possible wholly to exclude

rain-water from house-drains and from sewers.

i g torreut will be flowing. 23.-No hard and fast rule can be laid down as to the amount of rain-water which may be admitted to house-drains. It should however, be excluded, as far as possible, and carried off, by surface channels, to the storm-water system. As a rule, the rain-water from courts and yards not in custody with entering the Yee Hing-kok only should be admitted; places on which foul Glub, 27. Wing Lok Street, and wounding Ip matter may accumulate. The advantage of this Nam and stealing from a gambling table \$60 in arrangement, as regards the householder, is Bank notes and silver on the 22nd inst. great, for it facilitates the maintenance of the The circumstances of the case appear to house drain. It obvistes any necessity for that about 10 pm, on the 22ad inst., the defendhouse-drains of the prodigious diameters which pant with several others entered the Club, all beare but too common in Hongkong, and which lug more or less armed, and that the detendant of water. The common argument in favour of juring him that he is still in hospital. these huge drains is "make them big enough Dr. Lowson, Assistant Superintendent, Goand they will not choke up," thus assuming vernment Civil Hospital, stated that Ip Nam the existence of deposits as a necessary was admitted to Hospital about 12.30 p.m. on the incident in the working of a drain. Now if a 28th May, suffering from a wound in the butdrain is well laid and provided with proper traps, tooks. It seemed to be a wound of some standany solid object that can pass through, the trap ing and it appeared an incised wound. It was will be carried away by a reasonable flush. Of about three inches long and an inch and a half course an object large enough to obstruct a deep. It was filled with a lot of Chinese medismall pipe will not choke a large one, but will cine. romain in it, and form a nucleus of deposit: Lac Chun Shan, a Chinese doctor, stated that Thermom, 9 AM. 80 Therm. Maximum 89 What happens in drains of immoderate size is about 11 p.m. on the 22nd last, the injured man that deposit goes on accumulating, perhaps for came to him suffering from a wound in the butmany yours. The drain becomes a cess-pool, tock. Witness treated him for it and sent him Ultimately, it either chokes up altogether, and away. the sawage escapes by leaky joints, or the de-posit goes on accumulating until the sectionalures is diminished to that proper for the flow. and a passage is maintained by it. permanently, or till some casual obstruction takes place.

the architect most certainly provided a house drain of ample size to prevent it from becoming those ed. It was six feet high, and four feet wide. It did not choke for upwards of a century, and might have gone on for another hundred years. but for an outbreak of typhoid fever in the liouse that it drained, and a consequent examination of the drains. It was found that this supple channel was full of black deposit, up to the crown of the arch. Along this, however, there was a narrow water-way, equivalent in section to a six-inch pipe, the size of pipe ultimately used to drain this large mansion (Spencor House). 25.—Having thus described the principle which

24 -A case once came under my notice where

should be observed in the design of a system of sewerage, not only for the High-level District but generally, I will now proceed to the ex-amination of the plans, prepared by Mr. Cooper, for the sewerage of this district. I find that, the design is in strict accordance with the prinwiples laid down in the previous paragraphs of this report, which were fixed before the examin ation of the plans was undertaken.

26.-A main-sewer rous from along the northern or lower boundary of the Caine Road Bonham Road, and conducts the sewage to an out fall at Slaughter House point. This position of the out-fall is the natural one, assuming that this district is to be kept separate from those below it. It is the point to which the formation of the ground conducts the effluent of the district.

27.—Wherever the Praya sea-wall has its from Kennedy Town to Pedder's Wharf, and will be even more so when the Prays Reclamation is complete, there is no important reason which gives the preference to any one point, as an out-fall, over any other, provided always that the sewage is conducted out to a point well below low water mark and into a strong ran of tide. Salient points are preferable to re-entering angles on this account. It will be well to limit the number of out falls, slooply to reduce the cost New Malva of construction, and to poheentrate the flow Old Malwa. through them, so as to produde a brisk current, Older Malwa thus preventing deposit either in the out-fall Patus (New) pipes or at their mouth. Fresh sewage is very Bapares [Now]

MINERALS IN HONGKONG. TO THE EDITOR OF THE "DAILY PRESS." DHAR SIE -I notice an article in your issue of 26th just, on the subject of minerals in Hongkong, in which you mention that in the Colony of Ceylon attention is being directed to the possibility of minerals, other than graphite. being found on that island. / It would appear that for a long time searches have been made to discover gold in Caylou; as I find in an article in the Tropical Agriculturies of 1882 it stated :-The minerals galena mispickel, and blende have not been recorded up to the present time as occurring in this island." This article seems also to recognise that they had not even found the true geological conditions for minerals. By these conditions is meant the strata of rocks proved to be mineral bearers. The geological horizons, of lead, silver, gold, do, are usually described at in the silurian rooks, principally lower. It may be, therefore that in Ceylon these rocks are at great dopth necessitating boring to prove the existence of mineral. With Hongkong no deep boring in needed, as you suggest. Mineral, as you state, has been already proved to exist here and in its true geological horizon, at no great distance from the surface of the rocks. I have not only discovered and proved the existence of galena, &c., but I have, so far, found the geological position of the mineral bearing rocks to be lower silurian In "Geikle's Text Book of Geology" he says :-These, the silurian tracts, usually contain much d composing iron disulphide, which produces an efficrescence of slum; they are known as alumschists." This efflorescence of alum can be seen any day on rocks in this island. It may Trust & Loan Co. ..

be well for me to state, to allay the benerolent scepticism you describe, that the lode in Hongkong was proved by me in depth, 8 or 10 feet. It showed at the top 1 3/16cz silver. and a few pounds lead to the ton, and at 8 feet depth 700s silver and 1,720lbs. lead to the 10th May .- For Kabe-1,200 bags rice, 1,949 ton.
